

DRIPSTOP™ WORKS GREAT IN MANY TYPES OF BUILDINGS

Post-frame construction | Agricultural buildings | Steel buildings | Self-storage | Workshops | Detached garages | Open wall structures | Carports, truck ports, RV storage

Condensation control

Corrosion resistant

Saves time and money

Maintenance free

Durable

Reliable

DRIPSTOP™ - A BETTER WAY TO FIGHT CONDENSATION

One of the defining properties of any building is keeping the contents safe from the elements. If condensation from your metal roof is causing your contents to be rained on, your structure is failing in this basic function. Dripstop™ condensation control is a durable, cost-effective solution to protect your assets.

Dripstop™ is a faster and easier way to fight condensation in non-climate-controlled buildings, tried and tested in every climate condition everywhere across the world.

Dripstop™ is applied during the forming of the roofing pannels, therefore arrives at the job site already on, saving builders time and money.

DRIPSTOP™ - SAFE, RELIABLE, DRIP-FREE

When temperatures drop outside, warm wet air inside a building rises up and condenses on the cold metal roof, causing water droplets to form and rain down on the building's contents. Dripstop™ absorbs this condensation as it forms and traps it in the specially designed pockets in the membrane. It holds this moisture until the sun comes back out in the morning and it burns off into normal humidity in the air. As with any condensation control measure, it requires adequate ventilation to reset and prepare for the next cycle.

Dripstop™ offers a maintenance-free solution, ideal for roof manufacturers, builders and building owners. We offer unmatched customer support, increasing job site safety while reducing construction time and costs.

GET THE MOST OUT OF DRIPSTOP™

Rollformers

- Profitable-adds another profit center
- Reliable-tried and tested worldwide
- Innovative -a more efficient condensation control solution - sets your brand apart
- Outstanding customer service-gets you set up and ready to roll with ease

Contractors

- Saves half the time on the roof-arrives pre-installed
- Saves labor costs -no paying to install insulation
- Increases job site safety -see where you step
- Tried and tested solution worldwide
- Can be installed even in windy conditions

Building Owners

- Maintenance-free
- Fights corrosion
- Reduces noise
- Visually appealing

"I have never had one complaint... We have done over 300 buildings and I have been back to 75-100 and they all love it"

— Ohio builder —

"With double bubble or insulation, you take twice as much time. You have to lay down the insulation, and then you have to lay down the steel."

— Minnesota builder —

"We have had no complaints, no dripping, no issues, customers seem to really like it."

— Illinois builder —
